MR & DM Dashboard

Updated Change Summary - Calculations, metrics, charts and user-facing behavior

Purpose and scope

This replaces the previous guide in full. It summarizes the latest dashboard updates requested for the Medical Representative (MR) and District Manager (DM) tools. The dashboards remain separate: MR-only and DM-only scoring components are identified below. No uploaded workbook data is included.

Updated scoring defaults

Both score models use peer-percentile components where described in the dashboard. Default weights total 100%. When an input dimension is unavailable, the score is recalculated from available dimensions and their weights are renormalized.

Score component	MR default	DM default	What it represents
Total Ach%	60%	60%	Mean of Total, AM and PM achievement; capped at 150% before score scaling.
Activity	10%	5%	MR: working hours and AM/PM call rates. DM: AM/PM call rates.
Coverage	5%	5%	Peer-percentile coverage inputs relevant to each role.
Customer Quality	5%	5%	Customer mix / master-file quality inputs available to each role.
Productivity	5%	5%	ROI peer percentile.
Progress	10%	10%	Peer percentile of the Progress value supplied in the workbook.
Performance Item Ach%	5%	5%	Peer percentile for achievement on strategic performance items.
Coaching Activity	Not scored	5%	DM-only peer-percentile coaching activity dimension.

Key scoring clarifications

- **Commercial** is shown as **Total Ach%**; weight labels include plain-language descriptions of their inputs.
- MR Development/coaching is not a score component. Coaching indicators remain available on the MR Coaching Effectiveness page.
- MR Performance Item Ach% is included in the score at 5%. DM Activity is 5%, and DM Performance Item Ach% is 5%. The DM migration handles saved configurations that predate the Performance Item weight.
- **S1 Ach%** and **Performance Item Ach%** are also shown as informational values in cards/tables and exports. S1 Ach% is not a score component.

MR dashboard updates

Scoring, KPI rules, input terminology and Coaching Effectiveness were updated without changing unrelated dashboard calculations.

MR scoring and KPI behavior

- Default weights: Total Ach% 60%, Activity 10%, Coverage 5%, Customer Quality 5%, Productivity 5%, Progress 10%, Performance Item Ach% 5% (100% total).
- Activity uses peer percentiles of total working hours and AM/PM call rates. Coverage includes AM/PM coverage, PM frequency coverage and served-customer coverage. Customer Quality uses the available customer mix, master-file and customer coverage inputs. ROI feeds Productivity.
- Removed the **Weak AM Execution** and **Weak PM Execution** gap rules and their related Setup controls / recommendations. Low AM/PM achievement alone does not create those execution gaps.
- Added **PM Coverage** as an MR KPI gap, with a default cutoff of 90%. Values below 90% are flagged; 90% is not flagged. The threshold is editable in Setup.
- Renamed the former visit-count concept to **Cov Served**. Legacy Excel headers such as ?+12 Visits? and ?Customers visited 12 or more times? normalize to Cov Served; the label does not imply a fixed visit count.
- Progress is supplied by the user and may compare any periods (for example Q3 vs S1). It is not inferred from quarterly achievement values. When supplied, it participates in the 10% Progress score dimension.
- S1 Ach% and Performance Item Ach% appear as informational metrics in MR cards, tables and Excel export; S1 is not scored, while Performance Item Ach% is scored at 5%.
- The score completeness evidence set includes Performance Item Ach%. Missing score dimensions are omitted and the remaining weights are renormalized.

Coaching Effectiveness page

- Added a **MR Coaching Details** table with MR, team, Hiring Date, tenure in years, total/AM/PM coaching halves and Total Ach%.
- The Coaching vs Achievement scatter plot now includes Hiring Date in each MR point tooltip. A missing date displays as a dash in the table / tooltip.
- Coaching indicators remain available for analysis but are not part of the MR Performance Score.

Other MR presentation updates

- Activity & Productivity chart titles now match their specific measures: Working Hours vs Ach; AM Call Rate vs AM Ach; PM Call Rate vs PM Ach. AM/PM charts use their corresponding achievement values.
- The MR AM / PM KPI comparison now uses separate connected-dot (dumbbell) charts for Working Hours, Call Rate, Coverage and Achievement. AM is blue, PM is orange; each metric has its own scale and unit.

DM dashboard updates

DM-specific score weights, informational metrics and AM/PM chart presentation were updated while preserving DM-only coaching measures.

DM scoring and information fields

- Default weights: Total Ach% 60%, Activity 5%, Coverage 5%, Customer Quality 5%, Productivity 5%, Coaching Activity 5%, Progress 10%, Performance Item Ach% 5% (100% total).
- Activity uses AM/PM Call Rate peer percentiles. Coaching Activity uses Total Coaching, Check and Single Halves. Performance Item Ach% adds a peer-percentile score dimension.
- If a saved DM Setup predates the Performance Item weight, compatibility logic applies the updated 5% Activity / 5% Performance Item defaults.
- S1 Ach% and Performance Item Ach% are available as informational cards and tables and in Excel export. S1 Ach% is not included in scoring.
- Progress is supplied by the user and can represent a changing comparison period; the dashboard does not calculate it from Q1/Q2 or other achievement columns. When supplied, it is used as the Progress score input.

Shared gap visibility and AM/PM charts

- KPI Gaps counts now expose the individual gap names on hover in Low Performer / Risk queues and Action Plans. Risk Matrix point hover also includes the gap list. Counts, order and calculations are unchanged.
- The AM / PM KPI comparison replaced the Radar chart with separate connected-dot comparisons. MR shows Working Hours, Call Rate, Coverage and Achievement; DM shows Call Rate, Coverage and Achievement. Each metric retains its own scale to avoid comparing unlike units.
- The chart legend layout was moved below plots with additional bottom spacing to prevent legend labels from overlapping axis titles throughout both dashboards.

Activity & Productivity chart wording

Dashboard	Updated chart labels
MR	Working Hours vs Ach; AM Call Rate vs AM Ach; PM Call Rate vs PM Ach.
DM	Coaching Halves vs Ach; AM Coaching Halves vs AM Ach; PM Coaching Halves vs PM Ach.

Usage notes

- S1 Ach% and Performance Item Ach% remain informational on pages where displayed; only Performance Item Ach% is included in the role-specific score weights above.
- Missing KPI values are displayed as unavailable rather than treated as zero for score dimensions. Where a chart value is missing, the available side is still shown; where both are missing, the chart reports no AM/PM values.
- Editable Setup thresholds and weights may differ from the defaults documented here. This summary describes the default settings and the implemented changes listed above.
