MR & DM Dashboard Summary

The essentials: who each dashboard serves, how the score is built, and how to read the main alerts.

1. What the dashboards show

MR dashboard	DM dashboard
Individual Medical Representative performance: achievement, field activity, coverage, customer quality, productivity, coaching, and tenure.	District Manager performance: achievement, AM/PM execution, coverage, coaching activity, and team/district comparisons.

2. Performance score weights

Score component	MR	DM	In plain language
Total Ach%	60%	60%	Achievement is the largest part of the score.
Activity	10%	5%	MR: working hours and AM/PM call rates. DM: AM/PM call rates.
Coverage	5%	5%	Coverage indicators; DM also includes AM PHD and GL coverage.
Customer Quality	5%	5%	Customer mix and master-file indicators.
Productivity	5%	5%	ROI of Served Customers.
Coaching	?	5%	DM only; MR coaching is shown separately, not scored.
Progress	10%	10%	Uses the Progress comparison supplied for the reporting period.
Performance Item Ach%	5%	5%	Strategic product achievement.
Total	100%	100%	Default weights; editable in Setup.

How to read the score: most components are peer-percentile scores, not raw KPI values. If data is missing, available weights are rebalanced; data completeness is shown separately. Total Ach% classification and the weighted Performance Score are different measures.

3. Achievement bands

Critical Low	Low	Needs Improvement	Stable / Average	Good	High
<69.5%	69.5?<79.5%	79.5?<89.5%	89.5?<99.5%	99.5?<109.5%	?109.5%

Read the dashboard at a glance

Use these rules to understand priorities and avoid reading a summary number as the full diagnosis.

4. Priorities and gaps

Priority	Meaning
P1 - Immediate Intervention	Achievement below 69.5% and at least one identified KPI gap.
P2 - High Priority	Achievement below 79.5%, unless already P1.
P3 - Development	At least one KPI gap, but not P1 or P2.
P4 - Monitor	No higher-priority condition and no identified gap, or achievement is missing.

KPI Gaps is a count, not the explanation. Hover over the count to see the individual gaps. **Main Gap** shows only the first identified item. Thresholds can be changed in Setup.

Key defaults to know

MR	DM
PM Coverage is flagged below 90%. Weak AM/PM Execution are not MR gap rules. Cov Served is the flexible label for the served-customer field.	PM Call Rate below 95%, AM PHD Coverage below 80%, GL Coverage below 80%, or combined Coaching + Check + Single Halves below 207 can trigger gaps.
Both dashboards	Class A below 25%, Class C above 10%, master-file shortfall, and ROI above 9% are implemented gap checks. Confirm the ROI direction with your business definition.

Progress: enter the comparison you want for that period (for example Q2 vs Q1 or Q3 vs S1). If blank, the current dashboards fall back to Q2 minus Q1.

5. The main pages

MR	DM
Executive Overview; MR Performance; Low Performer Command Center; AM vs PM; Activity & Productivity; Customer Quality; Team & DM Performance; Coaching Effectiveness; Tenure; Scorecard; Risk Matrix; Action Plan; Setup; Issues Brief.	Executive Overview; DM Performance Matrix; Low Performer Command Center; AM vs PM; Activity & Productivity; Customer Quality; Business Unit & Team Performance; Coaching Activity; Tenure; Scorecard; Risk Matrix; Action Plan; Setup; Issues Brief.

Recent chart updates: AM/PM comparisons use separate, clearly labeled scales. MR charts compare Working Hours vs Ach, AM Call Rate vs AM Ach, and PM Call Rate vs PM Ach. DM charts compare Coaching Halves vs Ach and the matching AM/PM coaching halves vs achievement. MR Coaching Effectiveness also shows Hiring Date when supplied.

Keep in mind: scores are relative to the loaded comparison data. Recommendations and chart associations support review; they do not prove cause and effect. S1 Ach% is informational; Performance Item Ach% is included in both score models at 5%.
