DASHBOARD REFERENCE GUIDE

MR & DM Dashboard Calculations, Cards & Tables

A code-based reference to the calculations and outputs generated by the MR SFE and DM Effectiveness Command Centers.

Prepared from the project dashboard implementations.
MR source: dashboards/MR_SFE_Command_Center_YTD_Ready_V17.html
DM source: dashboards/dm_dashboard_V6.html
Scope: default settings and implemented logic; no workbook data was loaded for this guide.

1. Reading this guide

This guide describes what the dashboard code calculates and displays. It is not a policy document: editable Setup values can change the thresholds and score weights, and an uploaded workbook can provide already-calculated values that the dashboard preserves.

> **Important:** the two dashboards are separate tools. MR score components and gap rules are not identical to DM score components and gap rules.

Common mechanics

- The uploaded Excel file is normalized to expected column names. Some derived values are calculated only when the corresponding source value is missing.
- Filters apply to displayed cards, tables, and charts. MR filters: Business Unit, Team, DM, MR, employment type, Governorate, and Tenure Group. DM filters: Business Unit, Team, DM, Governorate, and Tenure Group.
- **Average** means the arithmetic mean of available numeric row values (null/blank values are omitted). It is not weighted by sales, target, or group size unless explicitly noted.
- **Sum** adds numeric row values; blank/non-numeric values contribute zero. **Count** counts matching rows.
- Score percentile ranks use all records in the loaded dataset, before dashboard filters; table and card aggregates use the current filtered selection.
- Percent values are stored as decimal ratios (for example 0.95) and shown as percentages (95.0%). Money formatting uses whole numbers.
- Missing values usually display as an em dash. Score dimensions with no evidence are omitted and the remaining score weights are renormalized.

Core derived data

Field	Implemented calculation when absent	Notes
AM Achievement	AM Sales Value ÷ AM FCT Value	Calculated only when AM FCT is greater than zero.
PM Achievement	PM Sales Value ÷ PM FCT Value	Calculated only when PM FCT is greater than zero.
Total Sales Value	AM Sales Value + PM Sales Value	Missing side treated as zero for this derivation.
Total FCT Value	AM FCT Value + PM FCT Value	Missing side treated as zero for this derivation.
Total Achievement	Total Sales Value ÷ Total FCT Value	Calculated only when Total FCT is greater than zero; a supplied value is retained.
Total Coaching Halves	AM Coaching Halves + PM Coaching Halves	Used by both dashboards when missing; DM coaching score additionally uses Check and Single halves.
Master File Gap	Standard Master File − Actual Master File	Calculated when both counts are numeric.
Progress (Q2 vs Q1)	Q2 Achievement − Q1 Achievement	Calculated when both quarter values are available.
Tenure	Hire-date-to-current-date month difference; Years = months ÷ 12	Groups: <6 months New Hire; 6–18 Early Tenure; 19–36 Established; >36 Experienced.

The dashboards have their own column aliases and naming variants (for example “Q2 Vs Q1 Progress” and “Q2 vs Q1 Progress”). Exact source headers may be normalized during upload.

2. Score calculation

Each record receives a 0–100-style score by combining available dimension scores. Most component scores are peer-relative percentile ranks, not raw KPI percentages.

Peer percentile used by score components

```
Percentile(x) = count of loaded-dataset values ≤ x ÷ count of valid loaded-dataset values
```

For inverse metrics (Class C%), the score is 1 − Percentile(x), so a lower Class C% ranks better. Master-file ratio is Actual ÷ Standard and is ranked against valid ratios. Percentile ties use the "≤" count.

MR score dimensions

Dimension	Default weight	Component score
Commercial	60%	Mean of available Total, AM, and PM Achievement; capped at 150%, then divided by 150% and multiplied by 100.
Activity	10%	Mean percentile of Total Working Hours, AM Call Rate, and PM Call Rate; each available metric contributes equally.
Coverage	5%	Mean percentile of AM Coverage, PM Coverage, PM Coverage by Frequency, and Coverage of Served Customers.
Customer Quality	5%	Mean of available percentiles for Class A%, inverse Class C%, Actual/Standard Master File ratio, Customers >3K, and customers visited 12+ times.
Productivity	5%	Percentile of ROI of Served Customers.
Development	5%	Percentile of Total Coaching Halves.
Progress	10%	Percentile of Q2 vs Q1 Progress.

DM score dimensions

Dimension	Default weight	Component score
Commercial	60%	Mean of available Total, AM, and PM Achievement; capped at 150%, then ÷ 150% × 100.
Activity	10%	Mean percentile of AM Call Rate and PM Call Rate.
Coverage	5%	Mean percentile of AM Coverage, AM PHD Coverage, PM Coverage, PM Coverage by Frequency, Coverage of Served Customers, and GL Coverage.
Customer Quality	5%	Mean of available percentiles for Class A%, inverse Class C%, and Actual/Standard Master File ratio.
Productivity	5%	Percentile of ROI of Served Customers.
Coaching	5%	Mean of percentiles of Total Coaching Halves, Total Check Halves, and Total Single Halves.
Progress	10%	Percentile of Q2 vs Q1 Progress.

Combining available dimensions

```
Performance Score = Σ(dimension score × configured weight) ÷ Σ(configured weights for available dimensions)
```

Result is rounded to one decimal place. Missing component KPIs are excluded from the component average; if an entire dimension has no data, its weight is excluded from the final denominator. Defaults sum to 100%; edited weights are normalized automatically by this denominator.

> **Interpretation:** because scores depend on peer ranks, adding/removing records can change scores even if a given person's own KPI values do not change. The absolute Commercial score is capped at the 150% achievement level; other dimensions are relative ranks.

3. Classification, risk, potential & completeness

Default achievement classification (both dashboards)

Total Achievement	Classification
Missing	Insufficient Data
< 69.5%	Critical Low Performer
≥ 69.5% and < 79.5%	Low Performer
≥ 79.5% and < 89.5%	Needs Improvement
≥ 89.5% and < 99.5%	Stable / Average
≥ 99.5% and < 109.5%	Good Performer
≥ 109.5%	High Performer

These cutoffs are editable in Setup. Classification uses Total Achievement, not the Performance Score.

Priority, default rules

1. **P1 – Immediate Intervention:** Achievement < 69.5% and KPI Gaps ≥ 1.
2. **P2 – High Priority:** if not P1, Achievement < 79.5%.
3. **P3 – Development:** if not P1/P2 and there is at least one KPI gap.
4. **P4 – Monitor:** otherwise, including missing achievement.

Potential flag, default rules

High Potential if Achievement is ≥ 79.5% and < 99.5%, and at least one KPI gap exists; otherwise **Normal**. This is an opportunity flag, not a causal inference.

Data Completeness

Dashboard	Numerator (available numeric fields)	Denominator
MR	Total/AM/PM Achievement; Total Working Hours; AM/PM Call Rate; AM/PM Coverage; PM Coverage by Frequency; Coverage of Served Customers; Class A%; Class C%; Standard/Actual Master File; Customers >3K; Customers visited 12+ times; ROI; Total Coaching Halves.	19 fields
DM	Total/AM/PM Achievement; AM/PM Call Rate; AM Coverage; AM PHD Coverage; PM Coverage; PM Coverage by Frequency; GL Coverage; Coverage of Served Customers; Class A%; Class C%; Standard/Actual Master File; ROI; Total Coaching/Check/Single Halves; Q1/Q2/Q3/Q4 Achievement; Q2 vs Q1 Progress.	24 fields

```
Score Data Completeness = available listed fields ÷ denominator
```

Data Completeness is an evidence-coverage indicator; it is not a score-quality adjustment beyond the separate missing-dimension weight renormalization.

> **MR display difference:** the Executive Overview Top 10 table calculates its “Data” column from 18 fields and excludes Progress; the Performance Scorecard card/table uses the model’s 19-field completeness measure, which includes Progress. They can differ for the same MR.

4. KPI-gap rules and default thresholds

Every matching rule adds one named gap. KPI Gaps is the number of matches; Main Gap is the first matching rule in the dashboard's rule order. Thus Main Gap is not necessarily the most severe gap.

MR gap detection

Gap name	Rule	Default
Low working hours	Total Working Hours below minimum	< 7
Low PM call rate	PM Call Rate below minimum	< 95%
Weak AM execution	AM Achievement below minimum	< 90%
Weak PM execution	PM Achievement below minimum	< 90%
Frequency coverage gap	PM Coverage by Frequency below minimum	< 80%
Low Class A%	Class A% below minimum	< 25%
High Class C%	Class C% above maximum	> 10%
Master file gap	Standard − Actual Master File above minimum	> 0
Low ROI	ROI of Served Customers above configured value	> 9%

DM gap detection

Gap name	Rule	Default
Low PM call rate	PM Call Rate below minimum	< 95%
Low AM PHD coverage	AM PHD Coverage below minimum	< 80%
Frequency coverage gap	PM Coverage by Frequency below minimum	< 80%
Low GL coverage	GL Coverage below minimum	< 80%
Low Class A%	Class A% below minimum	< 25%
High Class C%	Class C% above maximum	> 10%
Master file gap	Standard − Actual Master File > 0	> 0
Low ROI	ROI of Served Customers above configured value	> 9%
Low coaching activity	Coaching + Check + Single halves below minimum	< 207 halves

> **Business validation recommended:** both dashboards label ROI values *above* 9% as "Low ROI." That is what the current code does, even though the direction may be counterintuitive. Confirm whether the KPI's meaning/scale makes this intended before using the flag operationally.

MR Gap Setup exposes working hours, PM call rate, AM/PM execution, frequency, Class A, Class C, ROI, and Master File thresholds. DM Gap Setup exposes PM call rate, AM PHD, GL, frequency, Class A, Class C, ROI, and coaching-halves thresholds.

5. MR dashboard — pages 1–4

1. Executive Overview

Cards: Total MRs; Total Sales Value; Total FCT Value; Avg Total Ach.%; Avg Working Hours; Avg AM Call Rate; Avg PM Call Rate; Avg AM Coverage; Avg AM PHD Coverage; Avg PM Coverage; Avg PM Coverage by Freq.; Avg ROI; Avg Q1/Q2/Q3/Q4 Ach.%; Avg Progress; Low Performers; Critical Low.

- Totals sum filtered rows; all "Avg" cards are unweighted row averages.
- Low Performers count Critical Low + Low; Critical Low counts only that classification; each also displays its share of selected MRs.
- Performance distribution counts records in each of the six achievement classes.
- Management Signals compare mean AM vs PM Achievement; identify the Team with most Critical Low/Low records; report low-performer share, High Potential count, and most frequent Main Gap.

Tables: Top 10 by Performance Score (excludes Critical Low and Low; MR, Team, DM, Achievement, Score, Data Completeness, Main Gap); Bottom 10 by Total Achievement (MR, Team, DM, Achievement, AM, PM, Main Gap, Priority).

2. MR Performance

Table: all selected MRs, ascending by Achievement. Columns: MR (click to filter), Team, DM, Governorate, Tenure, Sales, Achievement, AM, PM, Hours, AM Call Rate, PM Call Rate, AM Coverage, AM PHD Coverage, PM Coverage, PM Coverage by Frequency, ROI, >3K Customers, 18+ Visits, Q1/Q2/Q3/Q4 Achievement, Progress, Score, Classification, Main Gap, Priority.

3. Low Performer Command Center

Cards: Critical Low Performers; Low Performers; % Sales from Low Performers; Avg Achievement – Low; Avg Working Hours – Low; Avg AM Call Rate – Low; Avg PM Call Rate – Low; Avg AM Coverage – Low; Avg AM PHD Coverage – Low; Avg PM Coverage – Low; Avg PM Coverage Freq. – Low; Avg Progress – Low.

Table: selected MRs below the configurable Low threshold, sorted by priority then achievement. Columns: MR, Team, DM, Class, Total Ach., AM Ach., PM Ach., Progress, Main Gap, KPI Gaps, Priority, Recommended Action. The table has a fallback diagnostic for missing gap data.

4. AM vs PM

Cards: AM Ach.%; PM Ach.%; AM Sales; PM Sales; AM Hours; PM Hours. **Charts:** mean AM/PM achievement; four-way AM/PM "Strong" classification using 100% as the cutoff; AM/PM radar comparison of Working Hours, Call Rate, Coverage, Achievement. The chart's bar and radar inputs are averages over selected rows.

6. MR dashboard — pages 5–9

5. Activity & Productivity

Charts: Total Working Hours vs Total Sales scatter; AM Call Rate vs Total Achievement scatter; PM Call Rate vs Total Achievement scatter. Points are colored by achievement classification. Horizontal/vertical reference lines use 100% achievement and 100% activity. AM and PM diagnostic quadrants classify each selected MR as high/low call rate relative to the selected-set median and below/at-or-above 100% achievement. Four quadrant counts and descriptive prompts are shown for each half.

6. Customer Quality & Master File

Cards: Avg Master File Gap; Avg Class A%; Avg Class C%; Avg >3K Customers; Avg 18+ Visits; Avg Served Coverage.

Charts: average Class A% vs Class C%; top 15 Master File Gaps. **Table:** top 30 by Master File Gap, columns MR, Team, Standard, Actual, Gap, Class A, Class C, >3K, 18+ Visits, ROI.

The visible MR labels say "18+ Visits," but the underlying field and score metric are "Customers visited 12 or more times." The dashboard's displayed label and source-field meaning do not match; verify the intended visit cutoff.

7. Team & DM Performance

Tables: Team Ranking (Team, MRs, Sales, Avg Achievement, Low count, AM/PM Call Rate, AM/AM PHD/PM Coverage, PM Frequency Coverage, ROI, Progress); DM Ranking (DM, MRs, Sales, Avg Achievement, Low, Critical, Coaching, AM/PM Call Rate, AM/AM PHD/PM Coverage, PM Frequency Coverage, ROI, Progress). Both are sorted by average Achievement descending.

Management flag: top eight DMs with more than 25% of their MRs classified Critical Low or Low; includes the low share and average achievement, with count of Critical performers if any.

8. Coaching Effectiveness

Cards: Avg Coaching Halves; Avg AM Coaching; Avg PM Coaching; Low Coaching MRs; Avg Achievement. Low Coaching MRs count those below the selected-set median of Total Coaching Halves. **Charts:** coaching halves vs achievement scatter by classification; average coaching halves by Team.

9. Tenure & Part-Time

Charts: average achievement by Tenure Group and Full Time vs Part Time. **Table:** Tenure/Employment Summary with group, count, average achievement, total sales, average hours, AM/PM Call Rate, AM/AM PHD/PM Coverage, PM frequency coverage, ROI, and Progress. If Part time is missing on upload, the MR loader defaults it to Full Time.

7. MR dashboard — pages 10–14

10. Performance Scorecard

Cards: Avg Performance Score; Top Score; Score <50 count; High Potential count; Avg Data Completeness. **Charts:** 20-bin score histogram; table of top 15 scores with MR, Team, Score, Data Completeness, Achievement, Progress, Main Gap, Priority. This table is score-sorted descending.

11. Performance Risk Matrix

Charts: scatter of KPI Gaps vs Total Achievement, grouped by P1/P2/P3/P4; count distribution by priority. **Risk Queue:** all selected MRs, priority order then achievement, with MR, Team, DM, Risk, Achievement, Progress, KPI Gaps, Main Gap, Potential.

12. Action Plan

Table: P1–P3 MRs only, sorted by priority then achievement: MR, Team, DM, Achievement, Progress, Problem/Root Cause, KPI Gaps, Potential, Priority, Recommended Action.

13. Setup

Editable achievement classification thresholds; seven score weights; P1/P2 achievement thresholds and minimum P1 gaps; Potential minimum/maximum achievement; MR gap thresholds (see Section 4). Save recalculates Score, Classification, Priority, Potential, and Gaps for loaded records. Reset restores code defaults. Settings persist in browser local storage.

14. Issues Brief

Cards: Business Units (“Clusters”), Teams, DMs; and counts flagged at each level. It builds group-level tables for Business Unit, Team, and DM Name with group count, average achievement, low count/share, critical count, average Progress, most frequent Main Gap, status, and recommendation. “Flagged” means more than 25% are Critical Low or Low. The top five flagged groups at each level receive issue-summary blurbs.

> This Issues Brief is MR-centric: its DM table describes MRs grouped by DM. “Cluster” is an alias for Business Unit; the source data has no separate cluster field.

8. DM dashboard — pages 1–4

1. Executive Overview

Cards: Total DMs; Total Sales Value; Total FCT Value; Avg Total Ach.%; Avg AM Call Rate; Avg PM Call Rate; Avg AM Coverage; Avg AM PHD Coverage; Avg PM Coverage; Avg PM Coverage by Freq.; Avg GL Coverage; Avg ROI; Avg Total Coaching Halves; Avg Check Halves; Avg Single Halves; Avg Q1/Q2/Q3/Q4 Ach.%; Avg Progress; Low Performers; Critical Low.

- Totals sum filtered rows; averages are unweighted record means.
- Low and Critical counts are based on classification.
- Performance Distribution counts records in each achievement class.
- Management Signals compare average AM vs PM achievement; Team with largest count of low DMs; low-performer share; High Potential count; and most frequent Main Gap.

Tables: Top 10 DMs by Performance Score, excluding Critical Low/Low; includes DM, Team, Business Unit, Achievement, quarterly achievements, Progress, Score, Main Gap. Bottom 10 by Achievement includes DM, Team, BU, Achievement, AM/PM, quarters, Progress, Main Gap, Priority.

2. DM Performance Matrix

Table: all selected DMs sorted ascending by Achievement. Columns: DM (click to filter), Team, BU, Governorate, Tenure, Sales, Achievement, AM, PM, Q1/Q2/Q3/Q4, Progress, AM/PM Call Rate, AM Coverage, AM PHD Coverage, PM Coverage, PM Frequency Coverage, GL Coverage, ROI, Total Coaching, Check Halves, Single Halves, Score, Class, Main Gap, Priority.

3. Low Performer Command Center

Cards: Critical Low Performers; Low Performers; % Sales from Low Performers; Avg Achievement – Low; Avg AM Call Rate – Low; Avg PM Call Rate – Low; Avg AM Coverage – Low; Avg PM Coverage – Low; Avg GL Coverage – Low; Avg Progress – Low; Avg Total Coaching Halves – Low; Avg Check Halves – Low; Avg Single Halves – Low.

Table: DMs below the configurable Low threshold, sorted by priority then achievement. Columns DM, Team, BU, Class, Total/AM/PM Achievement, Q1/Q2/Q3/Q4, Progress, Main Gap, KPI Gaps, Priority, Recommended Action.

4. AM vs PM

Cards: AM Ach.%; PM Ach.%; AM Sales; PM Sales; AM Coverage; PM Coverage; Avg Progress. **Charts:** mean AM/PM achievement; four-way AM/PM achievement classification using 100% as the cutoff; radar comparison for Call Rate, Coverage, and Achievement.

9. DM dashboard — pages 5–9

5. Activity & Productivity

Charts: Total Coaching Halves vs Total Sales; AM Call Rate vs Total Achievement; PM Call Rate vs Total Achievement. Scatter points are grouped by classification. Diagnostic quadrants use each selected-set median call rate and 100% Achievement threshold; the page displays the four quadrant counts for both AM and PM.

6. Customer Quality & Master File

Cards: Avg Master File Gap; Avg Class A%; Avg Class C%; Avg AM PHD Coverage; Avg GL Coverage. **Charts:** average Class A vs Class C; top 15 Master File Gaps. **Table:** top 30 by Master File Gap: DM, Team, Standard, Actual, Gap, Class A, Class C, AM PHD Coverage, GL Coverage, ROI, Progress.

7. Business Unit & Team Performance

Tables: Business Unit Ranking (BU, DMs, Sales, average Achievement, Low count, AM/PM Call Rate, AM/PM Coverage, GL Coverage, ROI, Progress, Coaching/Check/Single halves); Team Ranking (Team, DMs, Sales, average Achievement, Low, Critical, Coaching/Check/Single halves, AM/PM Call Rate, AM/PM Coverage, GL Coverage, ROI, Progress). Sorted by average achievement descending.

8. Coaching Activity

Cards: Avg Total Coaching Halves; Avg Check Halves; Avg Single Halves; Low Coaching DMs; Avg Achievement; Avg Progress. Low Coaching DMs count when Total Coaching + Check + Single halves is below the Setup minimum (207 by default). **Charts:** Total Coaching Halves vs Achievement scatter by class; average Coaching Halves by Team.

9. Tenure

Chart: average achievement by Tenure Group. **Table:** Group, DMs, average Achievement, Sales, AM/PM Call Rate, AM Coverage, ROI, Progress, Coaching, Check Halves, Single Halves. The DM dashboard does not display an employment-type split.

10. DM dashboard — pages 10–14

10. Performance Scorecard

Cards: Avg Performance Score; Top Score; Score <50 count; High Potential count; Avg Data Completeness. **Charts:** 20-bin score histogram; top 15 by score table with DM, Team, Score, Data Completeness, Achievement, Progress, Main Gap, Priority.

11. Performance Risk Matrix

Charts: KPI Gaps vs Total Achievement scatter, grouped by priority; record-count distribution by priority. **Risk Queue:** DM, Team, Priority, Achievement, Progress, KPI Gaps, Main Gap, Potential.

12. Action Plan

Table: all DMs not P4 (P1–P3), sorted by priority then achievement: DM, Team, BU, Achievement, Progress, Problem/Root Cause, KPI Gaps, Potential, Priority, Recommended Action.

13. Setup

Editable classification thresholds; seven score weights; P1/P2 thresholds and minimum P1 gaps; Potential range; DM gap thresholds (Section 4). Save recalculates score, classification, risk/potential, and gap fields. Reset restores defaults. Settings persist in browser local storage.

14. Issues Brief

Cards: Business Units, Teams, Governorates and counts flagged in each group type. Group tables for Business Unit, Team, and Governorate report DMs, average achievement, low count/share, critical count, average Progress, coaching/check/single halves, most frequent Main Gap, status, and recommendation. More than 25% Critical Low or Low flags a group; top five flagged groups receive issue-summary blurbs.

11. DM-specific interpretation notes

- The DM dashboard expects one row per DM-level record (it validates DM Name, Team, Total Sales Value, and Total FCT Value). It is not a roll-up of the MR file unless the uploaded rows are already aggregated for DMs.
- DM Activity in the score is based only on AM/PM Call Rate. Working Hours is not included in the DM score or DM gap rules.
- DM Coverage score includes six coverage percentiles; the explicit DM gap list only checks AM PHD, PM frequency, and GL thresholds (plus other non-coverage checks).
- DM Customer Quality score uses Class A, inverse Class C, and Master File ratio. Unlike the MR score, it does not use customer-count or visit-frequency percentiles.
- The DM Issues Brief groups DM records by Business Unit, Team, and Governorate. It counts low/critical DM classifications, rather than aggregating underlying MR outcomes.
- Progress is a peer percentile of Q2 vs Q1 change for the score, while overview cards and tables show the raw Q2 − Q1 difference.

12. Important interpretation caveats

- All “Main Gap” values represent the first matching check, not a prioritized root-cause analysis. Recommended actions are rule-based prompts and should be validated by a manager.
- Charts labeled “Strong/Weak” use 100% achievement for the half-day quadrant; page 5 uses the selected group median for call-rate activity.
- Some pages use a threshold hard-coded at 100% or 25% separately from configurable Setup values: for example AM/PM execution classes use 100%, and Issues Brief uses a fixed 25% group flag.
- Missing input values affect coverage, means, ranks, and score dimensions. Confirm workbook completeness and metric definitions before comparing results across uploads.
- The dashboard code has two stages that can recompute diagnoses after scoring. It also contains fallback diagnosis behavior in the low-performer page when derived fields are missing; displayed fallback can therefore differ from the main model’s gap list in unusual/incomplete uploads.

> **Recommended review before business use:** confirm the ROI threshold direction and units, the intended peer population for percentile scores, the DM source-data grain, and whether the fixed 25% management flags should remain fixed or follow a configured setting.

This document reflects the default values found in the project source files at preparation time. If code or Setup settings change, the dashboard is the source of truth for current behavior.
